SizingGrip class   Pieter van Dieren, 8 november 2002
pieter@synerga.nl

Description

The SizingGrip class makes it possible to show a small sizing grip bitmap in the lower right corner of dbViews and dbModalPanels.

This way users will know when they can resize a panel.

Usage

Unzip the file 'SizingGrip.Zip' to your projects directory. It will create a workspace directory SizingGrip. To view the example program that comes with this package, you first need to register the workspace. Click on the file 'Classes.VDFGuidance.SizingGrip.ws' in the Programs directory to register the workspace in VDF 8.x.

Then start the IDE and open the program 'Example'.
Compile and run the program to see what's happening.

Classes

cWsSizingGrip	This class shows the sizing grip bitmap in the lower right corner.
cWsdbView	A subclass of the standard dbView class. Some additional code is added to activate the sizing grip.
cWsdbModalPanel	A subclass of the standard dbModalPanel class. Some additional code is added to activate the sizing grip.
cWsBitmapContainer	A subclass of Wil's cvBitmapContainer class.
cvBitmapContainer	A class which makes it possible to use transparent bitmaps

In order for the sizing grip to appear, you need to set the border of the view or modalpanel to 'Border_Thick'.

Credits

Special thanks to Wil van Antwerpen for sharing his cvBitmapContainer class which makes it possible to use transparent bitmaps.
Don't forget to take a closer look at his vWin32fh.pkg package as well. It contains a collection of file handle methods.
